

LOSS OF CONTAINMENT

Spill_Inspector™

The loss of containment analytics feature will **accelerate early detection and location of crude oil leaks** before they become critical to customers by providing frequent, autonomous inspections of oil and gas pump jacks, heater treaters, tanks, pipes, pumps, and more via the autonomous Scout System.

Through artificial intelligence anomaly detection capabilities tailor-made for the oil and gas industry, American Robotics is providing customers with the tools they need to reduce reputational risk resulting in loss of revenue and brand value, while minimizing environmental risk and costs associated with clean-ups.

WHAT DOES IT MEAN FOR OIL SPILLS?

Catch it early. Minimize crude on the ground. Reduce clean-up costs and reputational risk.
